Type the following command to navigate to the folder containing the ProcDump tool and press Enter: `cd C:\PATH\TO\PROCDUMP` In the command, make sure to update the path with the folder's location with the ProcDump tool. Source: Windows Central Confirm a path to extract the files. You can also use the tool to create multiple dumps at different intervals automatically. More Windows 10 resources For more helpful articles, coverage, and answers to common questions about Windows 10, visit the following resources: We may earn a commission for purchases using our links. Create minidump during launch of a process To launch an app, keep monitoring it, and write a dump file when an exception occurs, use these steps: Open Start. Usually, you would use this file for analysis to determine the root of a problem with an app or the OS. A "dump" is a special file that contains (all or parts) of the data loaded in memory at the time dump was triggered. Click the Extract all option from the "Compressed Folder Tools" tab. Although Windows 10 can create crash dumps files automatically when it encounters an error that it cannot handle, sometimes you may still need to generate these files manually. We are focusing only on some basic examples. To get started with the ProcDump tool, use these steps: Open Start. Once you complete the steps, you can use ProcDump with Command Prompt to create dumps files on Windows 10. Open the zip folder. Type the following command to navigate to the folder containing the ProcDump tool and press Enter: `cd C:\Users\username\Documents\Procdump` Type the following command to start an app and create a dump file when it crashes, and press Enter: `procdump -e 1 -f "" -x C:\PATH\TO\STORE\DUMP "C:\PATH\TO\APP.EXE"` In the command, replace `C:\PATH\TO\STORE\DUMP` for the folder location to store the dump. Search for Command Prompt, right-click the top result, and select the Run as administrator option. Source: Windows Central Save the file on the device. Type the following command to navigate to the folder containing the ProcDump tool and press Enter: `cd C:\Users\username\Documents\Procdump` Type the following command to monitor and create a full dump file when one or more processes crash and press Enter: `procdump -ma -i C:\PATH\TO\STORE\DUMP` In the command, replace `C:\PATH\TO\STORE\DUMP` for the location to store the dump file. Type the following command to navigate to the folder containing the ProcDump tool and press Enter: `cd C:\Users\username\Documents\Procdump` Type the following command to write a minidump file when a process becomes unresponsive for more than five seconds and press Enter: `procdump -h PROCESS-NAME DUMP-NAME.dmp` In the command, replace the `PROCESS-NAME` for the name of the process you want to monitor and `DUMP-NAME` for the file's name. Here's how: Open Start. How to use ProcDump on Windows 10 The ProcDump tool includes many options to record and create dump files. Type the following command to navigate to the folder containing the ProcDump tool and press Enter: `cd C:\Users\username\Documents\Procdump` Type the following command to write a minidump file when the process exceeds the 20% processor usage for 15 seconds and press Enter: `procdump -c 20 -s 15 PROCESS-NAME` In the command, replace the `PROCESS-NAME` for the name of the process you want to write a dump. Learn more. In this Windows 10 guide, we will walk you through the steps to use the Microsoft ProcDump tool to generate dump files manually on your device. Click the Download ProcDump link. Type the following command to create a full dump file for an application and press Enter: `procdump -ma APP-OR-PID` In the command, replace `APP-OR-PID` for the name or process ID of the app. Create minidumps based on processor usage To write a dump file after the app system usage reaches a specific threshold, use these steps: Open Start. Whatever the reason might be, the Microsoft ProcDump tool is a nifty tool you can use in Command Prompt to create a crash dump file in many different ways, including generating a minidump file using the app or process name or process ID. You can always run the `procdump -e` command to review all the available options. This example writes five dump files for the Windows Explorer process: `procdump -s 15 -n 5 explorer` Source: Windows Central Once you complete the steps, the tool will create (in this case) five dump files 15 seconds apart from one another. Source: Windows Central On Windows 10, ProcDump is a command-line tool specifically designed to create crash dump files manually. Source: Windows Central Check the Show extracted files when complete option. Click the Extract button. This example creates a dump file of Google Chrome when it crashes and stores the "dump" file inside the dumps folder: `procdump -e 1 -f "" -x C:\dumps "C:\Program Files\Google\Chrome\Application\chrome.exe` Source: Windows Central After you complete the steps, the tool will launch and monitor the app, and when it crashes, it will create a dump file in the folder location you specified. After you complete the steps, the dump file will be generated in the ProcDump folder. This example creates a dump file for the File Explorer app: `procdump explorer` Source: Windows Central Type the following command to create a dump file using the process ID of the app and press Enter: `procdump PROCESS-ID` In the command, replace `PROCESS-ID` with the actual ID of the process or application. Create multiple minidumps manually To use ProcDump to create multiple minidump files on Windows 10, use these steps: Open Start. Also, remember to update the 15 for the number of seconds to wait before generating a new file and 5 for the number of dump files you want to create. Also, remember to replace 20 and 15 for processor usage and a wait time in seconds. This example creates a full dump file for File Explorer: `procdump -ma explorer` Source: Windows Central Quick note: A full dump file contains everything available in memory related to the application. Or you can specify other criteria, such as when the process reaches a specific processor usage, the app is unresponsive, and more. Create minidumps for unresponsive process To create a minidump as soon as a process is unresponsive, use these steps: Open Start. Activate Postmortem Debugger to create full dump automatically You can also register the tool as a Postmortem Debugger to allow ProcDump to monitor and automatically write a full dump when one or more processes crash. This example writes a dump when the Windows Explorer process becomes unresponsive for five seconds: `procdump -h explorer explorer-unresponsive-data.dmp` Source: Windows Central Once you complete the steps, a dump file will be written to the ProcDump folder when the application becomes unresponsive. Also, change `C:\PATH\TO\APP.EXE` for the path of the app you want to monitor and create a dump. This example writes a dump file of the explorer.exe process that uses over 20% of processor resources for 15 seconds: `procdump -c 20 -s 15 explorer` Source: Windows Central (Optional) Type the following command to write an error dump file when a specific app pushes processor usage above 20% for 10 seconds and press Enter: `procdump PROCESS-NAME -p "Processor( Total)\% Processor Time" 20` This example writes a dump file of the explorer.exe process that uses over 20% of processor resources for 10 seconds: `procdump explorer -p "Processor( Total)\% Processor Time" 20` After you complete the steps, the command will monitor the application, and when it exceeds the processor usage for the time you specified, then a dump file will be generated. In the steps below, we will show you a bunch of examples to create a dump file for a specific application and different scenarios, including when a process is unresponsive, crashes, uses a significant amount of processor resources, and more. For example, this command opens the tool location inside the "Downloads" folder: `cd C:\Users\username\Documents\Procdump` Type the following command to create a minidump file of a running app and press Enter: `procdump APP-NAME` In the command, replace `APP-NAME` for the executable name of the app. Type the following command to navigate to the folder containing the ProcDump tool and press Enter: `cd C:\Users\username\Documents\Procdump` Type the following command to write five minidumps 15 seconds apart from one another and press Enter: `procdump -s 15 -n 5 PROCESS-NAME` In the command, replace the `PROCESS-NAME` for the name of the process you want to write a dump. How to install ProcDump on Windows 10 How to use ProcDump on Windows 10 How to install ProcDump on Windows 10 To install the ProcDump command-line tool on Windows 10, use these steps: Open ProcDump official page. This examples stores the full dump file in the "dumps" folder: `procdump -ma -i C:\dumps` Source: Windows Central Once you complete the steps, the ProcDump tool will monitor the system, and it will create dump files whenever an application crashes. This example creates a dump file for File Explorer with the process ID of 6468: `procdump 6468` Source: Windows Central Quick tip: You can always confirm the process ID (PID) of an app in the Details tab of Task Manager or using the `tasklist` command. Confirm the location of the .dmp file. In contrast, a minidump file is only several megabytes in size, and it includes basic information about the application. For example, if you are a developer and you are testing a new application. Or when an app is not responding or constantly crashing, and you need to send the details to the software vendor support to investigate the issue.
